

Cleaning instructions of highly sensitive surface texture with high-gloss elements

Dear Customer,

in order to get the brilliant and therefore also sensitive textured surface in the desired shine, the following steps for cleaning and maintenance must be observed:

- ensure a dust-free environment
- dirt and dust particles should not come into contact with the corrosion protection on the texture
- the ambient air should be free of moisture and corrosive vapors
 - it's also a good idea to wear a face mask to keep moisture away from the texture.
- thoroughly rinse off the corrosion protection of the structured surface with brake cleaner or Rivolta cleaner A.C.S. 3-Spray and ensure that it runs off properly (tool position).
- then clean the remaining streaks with high-quality cotton pads (facial cosmetics) and, if necessary, with high-quality facial tissues and make sure that the cotton pads and facial tissues are always damp
 - for this it is helpful to wet the textured surface properly with brake cleaner or Rivolta A.C.S. 3-Spray

**do not use handkerchiefs instead of cosmetic tissues!
furthermore, do not use acetone as it is very fleeting and there is a risk of dry cleaning**

to protect the structured surface from corrosion, only use the product Rivolta K.S.P. 305 protection spray and then cover the textured surface with cotton pads and a layer of facial tissue

Please do not hesitate to contact us
if you have any questions!
